

Third-Party APIs / SDKs Used – AgentPay OS

The following third-party APIs and SDKs are used in the AgentPay OS project. All tools listed below are open-source or publicly available SDKs. Their licenses and usage permissions are clearly visible in the project repository through LICENSE files, package manifests, or official documentation references.

- wagmi – React hooks for Ethereum wallet connectivity (MIT License)
- viem – Ethereum JSON-RPC client for blockchain interactions (MIT License)
- MetaMask SDK / Injected Wallet Providers – Wallet connection and user authentication
- Etherscan API – Blockchain transaction and address lookup
- Express.js – Backend framework (MIT License)

No proprietary or restricted software is used in this project without permission. All third-party dependencies comply with their respective licensing terms and are properly documented in the repository.
